

# INSTALLATION INSTRUCTIONS:

## Six Easy Steps to Install Your Tree Defender

### STEP 1.

Start with a Tree Defender custom composite stake which includes a glued on or riveted cap. Install the Tree Defender stake as close to the wrapped tree as possible. Insert stake 12" into the ground

### STEP 2.

Slide your Tree Defender over top of stake and tree. Be sure to completely cover your tree.

### STEP 3.

Secure the top by wrapping the zip tie provided around the Tree Defender & stake just below the cap.

U.S. Patent Nos. 11,122,752; 11,406,068;  
11,497,176; and 11,503,777

## STEP 4.

It is optional to close your Tree Defender at the bottom as the psyllids flight pattern is only horizontal. If you choose to close your Tree Defender, bunch up material around the base of tree trunk and wrap.

## STEP 5.

Secure zip tie, all weather tab band or soft horticultural wire tie around Tree Defender custom composite stake, and tree wrap. Ensure it's tight.

## STEP 6.

Sit back, relax and let Tree Defender do the work.

OK... so maybe just 5 steps.
